

# GRAND POWER YESTERDAY TODAY TOMORROW

20 YEARS

## FOREWORD

### BY JAROSLAV KURACINA

Dear customers, fans, friends! 2022 is a milestone year which marks twenty years of production of world-class firearms in the heart of Slovakia. Two decades have flown by but it seems like it was just yesterday. Nevertheless, this time is packed full of positive experiences, twists and turns, disappointments, as well as moments of joy. Many proud moments have come thanks to the successes of our factory competition shooters from all around the globe, with many world championship titles. But there have been other reasons for celebration.

In this time we have also had to contend with many disappointments, overcome many challenges and scale many an obstacle. Today, however, shows that gritting my teeth and persevering in the most difficult times has paid off. This is the reason why I can look back with pride in my heart and my head held high. What makes me happier than success in business and worldwide fame is the ability to employ more than 120 people who have, in my factory, found not just a job but, I believe, also a second home.

My wish is that in another twenty years our ranks will be at least twice as large and that we will still be able to bring high quality and reliable firearms, which will be a dream come true for every shooter, to the shooting community around the world.

**Jaroslav Kuracina**  
GRAND POWER Ltd.  
Owner & CEO

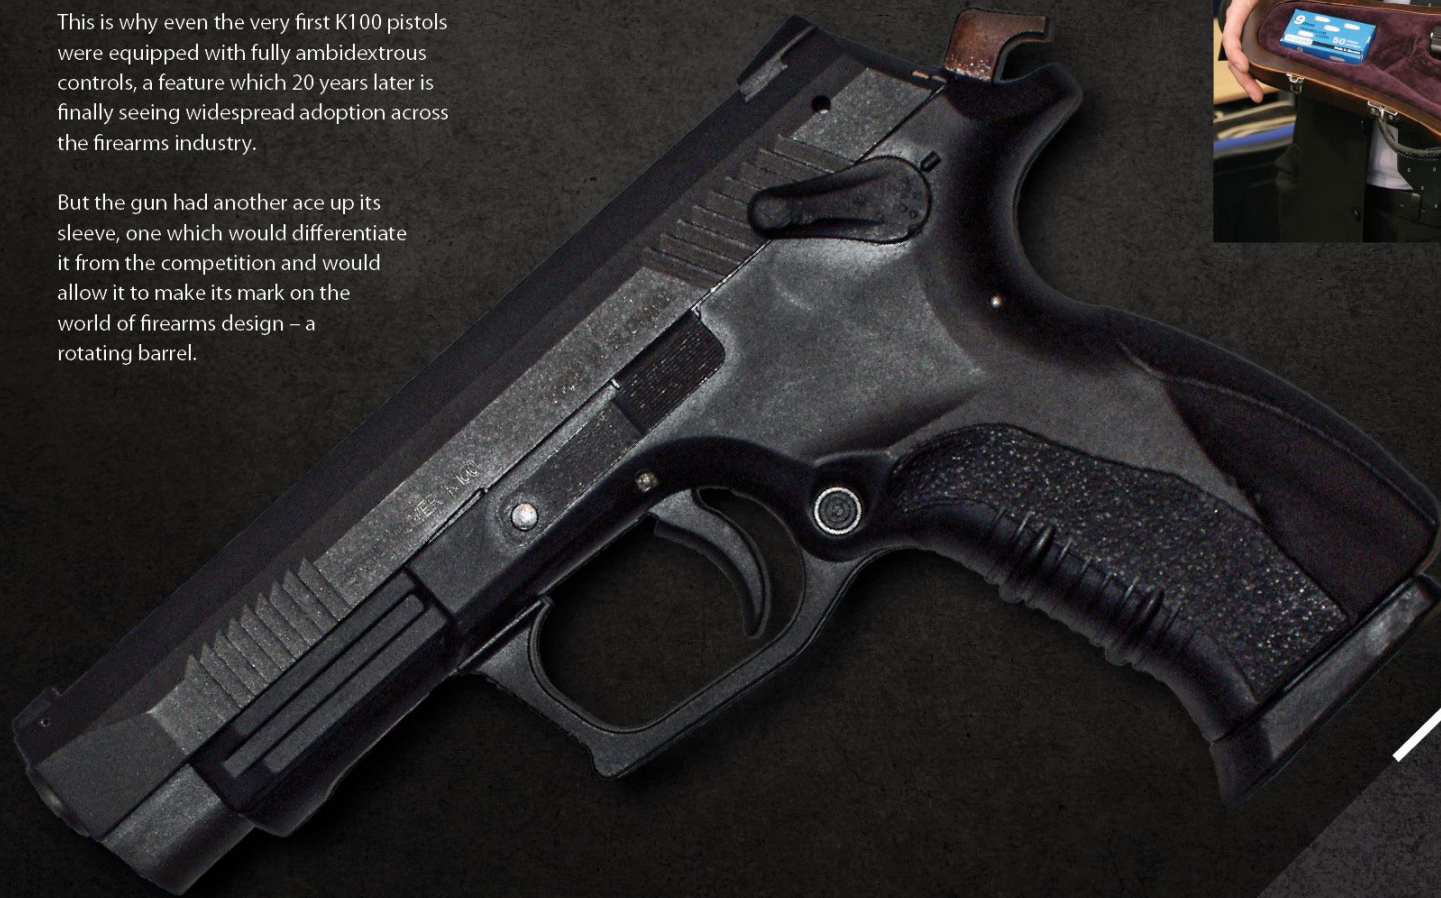

It really seems as if it were yesterday when, in a small rented room in Banská Bystrica, the designer, engineer, technician, gunsmith, sales manager, and head of logistics were sitting together with the owner and CEO over the first production units of the K100 pistol. The catch is that the room only had one chair.

As a career soldier, Jaroslav had a vision in his head of the perfect service handgun. A weapon which would be reliable, safe, robust, modern, equipped with modern controls, but most importantly, ergonomic and user-friendly.

This is why even the very first K100 pistols were equipped with fully ambidextrous controls, a feature which 20 years later is finally seeing widespread adoption across the firearms industry.

But the gun had another ace up its sleeve, one which would differentiate it from the competition and would allow it to make its mark on the world of firearms design – a rotating barrel.

This feature is now an integral part of GRAND POWER firearms and it is thanks to this solution that lends them a noticeably lower recoil and muzzle flip – factors which go a long way to fulfil the vision of a user-friendly weapon.

# TODAY

During its 20 years of operation GRAND POWER has grown from a rented room into owning two production facilities in Slovenská Ľupča and Kremnické Bane. The jobs which during in the beginnings of the company were performed by one person

The company which in its beginning had one employee now employs over 120 people. Small batches of firearms have turned into shipping containers of several thousand firearms leaving its premises headed for over sixty different countries.

The STRIBOG line has in a few short years steamrolled the American market where it has firmly established itself in a sea of some pretty tough competition and continues to grace the covers of gun magazines around the world.

In the year of its twentieth birthday the company has started producing modern semi-automatic rifles GP R15 and the distinctive GRAND POWER R15 Freya and Freya Skeleton. To cater to the needs of armed forces and law enforcement we have developed a line of select-fire GP M4 rifles as well as a piston driven GP M4M.

Recent legislative changes in Slovakia have also prompted the introduction of a new product line – sound suppressors for a wide range of calibers.

In the last year the world has seen a significant increase in demand for firearms from both civilians as well as military customers. GRAND POWER has a full line of firearms well-suited for use by militaries, law enforcement and security forces. K105 and K102 machine pistols, STRIBOG AP9 and AC9 submachine guns in different configurations, even GP vz.16 heavy machine guns in 12.7x108 and .50BMG. GRAND POWER will be increasing its

production capacities in this segment without forgetting its customers – competitive and recreational shooters, or those who, day after day, count on GP firearms for their safety and the safety of their loved ones. In the very near future, the Mk23 model will bring some much-needed improvements and more modern features to our portfolio.

# QUALITY

Our company has always strived to bring something extra to our customers. To go the extra mile. Not to settle for good enough. This is why we continually strive to improve our products, our production methods, technologies and designs, raising our own bar for quality ever higher. Ninety percent of all components of GRAND POWER firearms are produced at our own production facilities to ensure that all components undergo the highest level of quality control. Individual components undergo QC checks after every machining step with the help of the most modern 3D measuring instruments. Machined parts are then deburred, polished and fitted by hand as necessary. The next quality check is carried out during the assembly of our firearms, where expert gunsmiths check the quality of individual parts and finished firearms. Subsequently, every firearm is subjected to a final QC check which also entails every firearm being test fired for function and accuracy. Every handgun ships with a target showing the grouping shot during this test. The final step before a firearm being released on the market consists of proof testing in an official proof-house.

At GP we believe that only a multi-step QC check can guarantee the highest quality product which customers have come to expect from GRAND POWER.

The heart of GRAND POWER handguns is the so-called insert – a steel container in a polymer grip module machined out of a single piece of steel which holds all of the individual components in one robust unit. All load and pressure bearing components are machined out of solid steel. While this method is costlier and more time consuming, the quality of parts produced this way far outperforms other production methods.

# PRODUCT LINES

GRAND  
POWER

## THE FLAGSHIP X-CALIBUR

The X-calibur firmly belongs among the worlds' very best IPSC firearms and has achieved several world championship wins in the hands of competition shooters.

# THE CLASSIC

The mainstay product line derived from the legendary and venerable K100 model. Fully ambidextrous controls and robust construction with a rotating barrel – that's the K100 in a nutshell.

**K100**

**P1**

**P11**

# STRIKER-FIRED

The answer to many requests from our customers comes with a linear striker system while retaining all of the benefits and qualities of the base K100 line.

**Q100**

**Q1**

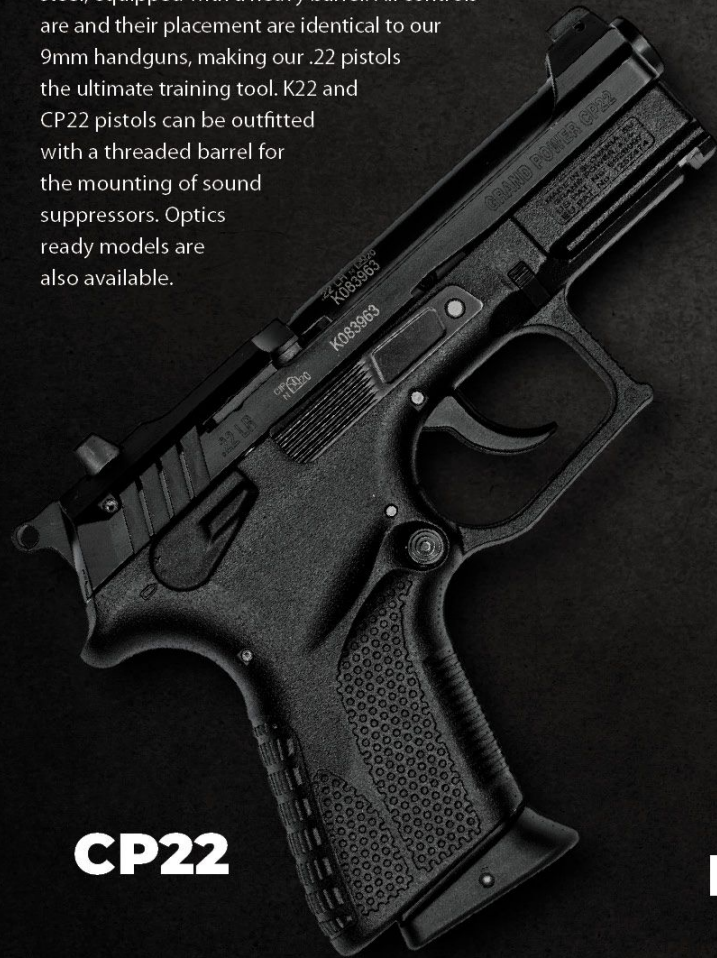

**Q1S**

# OTHER POPULAR PISTOL MODELS

GRAND POWER has a portfolio of more than 50 different models of pistols in a wide range of calibers. Among the very popular models are our reliable .22LR pistols with slides and frames machined out of high-quality steel, equipped with a heavy barrel. All controls are and their placement are identical to our 9mm handguns, making our .22 pistols the ultimate training tool. K22 and CP22 pistols can be outfitted with a threaded barrel for the mounting of sound suppressors. Optics ready models are also available.

# STRIBOG

The clear bestseller both at home and abroad, the STRIBOG line includes compact models and competition specials in countless possible configurations. The STRIBOG is characterized by a highly modular design, robust construction and great reliability.

## R15

To create the modern self-loading GP R15, R15 Freya and R15 Freya Skeleton, GRAND POWER designers took inspiration from the proven AR15 design and brought it to perfection by implementing the latest technologies, materials and features. The Freya and Freya Skeleton further bear a very distinct design flair from GP.

# MODEL LINE Mk23

The Mk23 series of pistols combine your favourite GP features - robust and reliable design with fully ambidextrous controls - with modern feats such as updated aggressive design with grippier front and rear cocking serrations, more prominently textured grip and backstraps and the most important update – Mk 23 pistols are red dot ready out of the box.

## MILITARY PRODUCTION

GRAND POWER offers a wide range of firearms to cover the needs of security forces, from automatic pistols, submachine guns and assault rifles, and even heavy machine guns. The company has the ability to dynamically answer the customers' requirements and this is the reason why we can count US SOCOM among our customers.
